 - Service Life Calculations
 - Interchange & Research
 - Slew ring manufacturing, modifications & reconditioning
 - Spare parts (balls, rollers, spacers & seals)
 - Reporting
 - Insurance & Legal Work
 - Full Turn Key Service & Annual Assessments
- 
- The background image shows a large industrial crane, likely a gantry crane, at a port or construction site. The crane is white and green, with a long jib extending upwards. It is positioned over a large pile of dark material, possibly coal or ore. The sky is clear and blue. The overall scene is industrial and suggests a heavy-duty environment.

FORGINGS Seamless rolled ring forging is typically performed by punching a hole in a thick, round piece of metal (creating a donut shape), and then rolling and squeezing (or in some cases, pounding) the donut into a thin seamless ring.

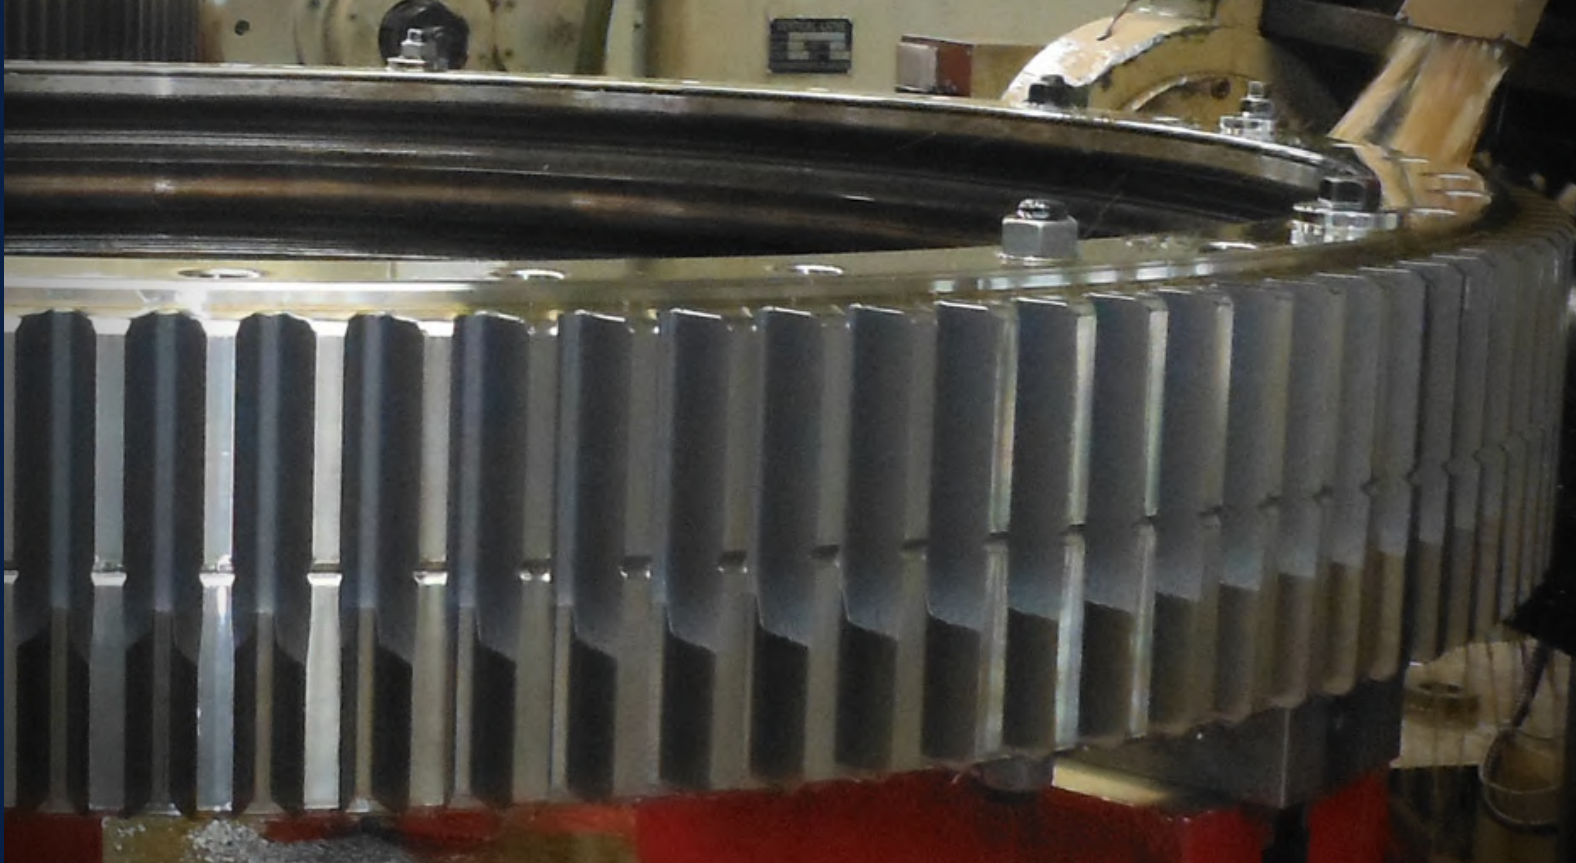

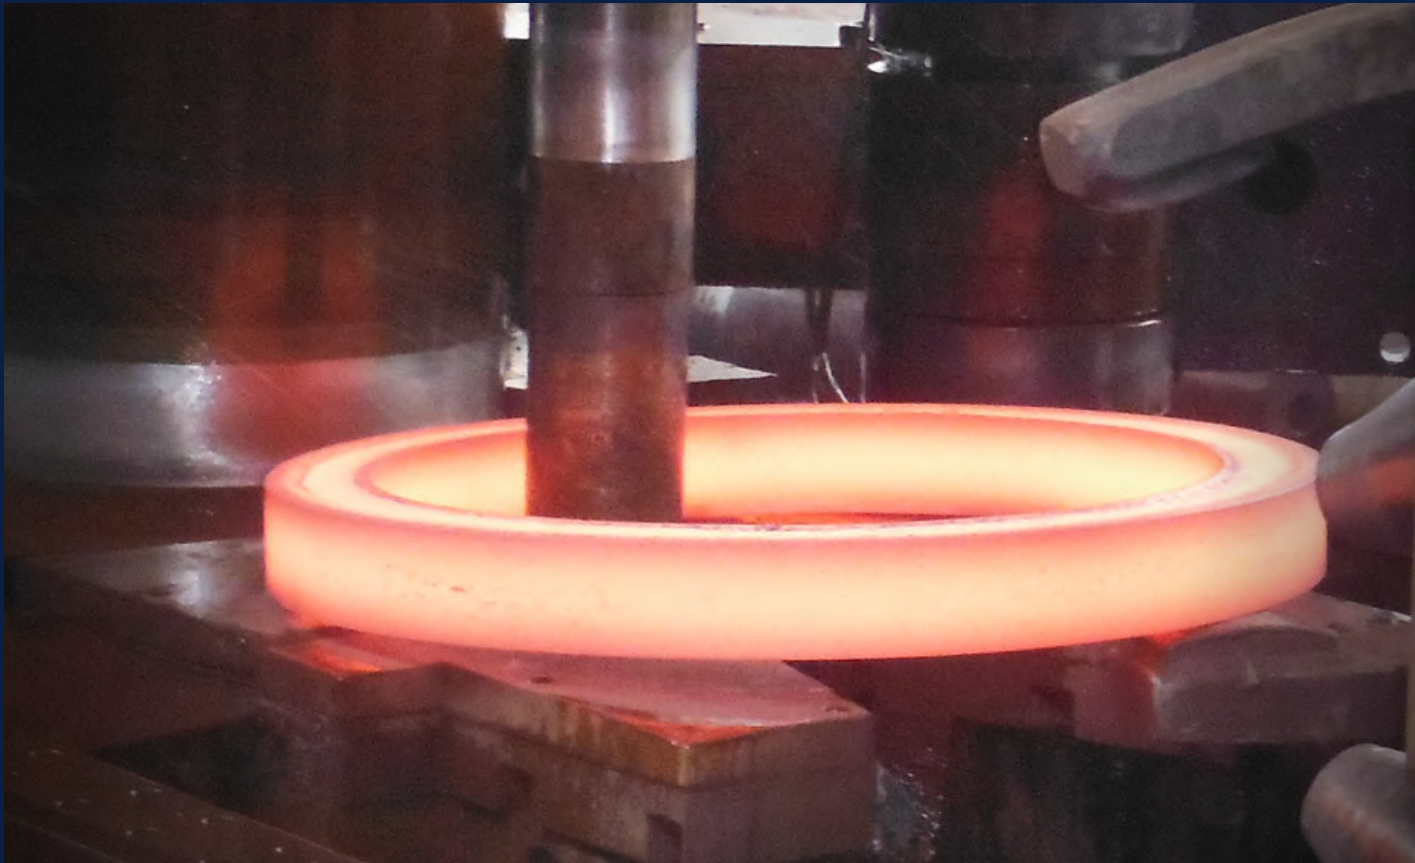

DIAMETER RANGE

100MM

12,000MM

Solid & Segmented designs

CERTIFICATION

The factory we use is ISO 9001-2000 certified and our engineers carry out factory QA Audits on a regular basis, so you can be assured the highest quality and compliance.

Our bearings are made to our specifications which is what sets us apart from our competitors.

We build safe, high quality bearings,
faster and cheaper than anyone else.
